This is by far the most complete, easy to use, highly customizable real-time booking component. Also has a lot of great plugins available to extend it`s functionality. I have (till now) one accommodation booking portal (with studios, apartments, hotels, hostels, camp areas, villas and others) and an apartments booking website up and running in no time.

Also, the support from Vince and Hazel was absolutely great. They answered in no time, even if sometimes my questions were not about Jomres only.

I recommend Jomres to any property manager that wants an easy to use and also powerful, full featured, secure online booking system.
