I bought the multi site option where I can install on unlimited sites and constantly get updates.

The component is one of those you need to work with. You need to work on the styling of the pages. It is a bit like Virtuemart - out of the box there are better looking components.

With quite a bit of work my set up looks pretty good.

Vince Woolly and Hazel man the forum. They give a very good service.

You are not left without some support. Sometimes it is beyond what the component will do but if there is a reasonable way then he will try to help.

I would recommend this as a booking engine and with work a presentation component for rentals.

It can also be used for sales of property if you like.

It can be translated - but not through Joomfish (though this is needed to effect language switches) It will go SEF with sh404SEF and it also has an Xmap plugin.

What more could you want. It is worth every penny - really
